

Dynamics **Greens Care Units**

The NEW route
to high quality greens

Dyna-Seeder

Are your greens getting past their prime?

If your greens are slowly filling up with Poa Annua, when really you are wanting to increase the percentage of bent and fescue in them, here's the easy way to do it.

Simply Dyna-Seed them.

Overseeding is like a blood transfusion that puts fresh vigorous new growth into your turf. The problem that greenkeepers usually face with overseeding is that their members object to the disruption, so they have to wait till too late in the year when the warmth has gone out of the soil, and then they don't get proper germination. This is a huge waste of expensive seed.

The new Dyna-Seeder units open up a totally different opportunity. Because they fit so discreetly on your triple mower, your members won't even notice what you are doing, thus letting you do it when the soil is warm. Their super precise mechanism can plant pure bent seed at just 5g per metre, accurately and without wind drift.

"Fescue seeds clearly in the holes made – saved about 2/3 normal amount of seed"

"80% germination of Bent seed after 2 weeks"

"You grow what you sow!"

Special trolleys store the Dynamics units when not in use, and enable them to be fitted to the mower with ease.

How the revolutionary Dyna-Seeder works...

- 1** The vibra-spiker mechanism vibrates the spikes into the ground which produces thousands of clean open holes for the seed to lodge and germinate in.
- 2** At the same time the seed is precisely metered out onto the green at the most economical application rate and pushed into the ground by the rotating spikes as they penetrate.
- 3** The precision seeding mechanism has a wide range of pre-set application rates which will handle bent seeds, fescue seeds and mixtures. Even pure bent can now be accurately and economically sown, without wind drift.
- 4** Enjoy the excellent germination rate, and fresh dense growth on your greens!

The benefits - at a glance...

- ✓ The most direct way to get the grass species you want, growing in your greens
- ✓ Vibratory spiker creates neat plant pots for seed to lodge in
- ✓ Highly accurate metering saves huge expense on seed
- ✓ Members unlikely to notice reseeded work being done with a triple mower
- ✓ The whole seeding operation on 18 greens can now be done in hours, not days - and at any warm time throughout the season, for successful germination

Dyna-Corer

NEW

The discreet way to micro core your greens without your members noticing or objecting – do it with your greensmower!

TINE OPTIONS

- Hollow Core Tines
- Solid Tines
- Needle Tines
- Cross Tines

Fast micro coring with your greens triple mower.

Now that *is* revolutionary! A greenkeepers' dream! Hollow coring using a triplex, so quick and clean that the members will hardly notice it being done.

The Dyna-Corer's micro tines effectively remove thousands of tiny core plugs. An ideal thatch control or pre-seeding treatment. The coring depth can be precisely adjusted down to a maximum of 25mm.

Interchangeable solid tines are also available, plus NEW cross tines.

"One of those pieces of equipment that comes available every few years and is "Wow!" and it changes the way you maintain your greens."

The side-ejection tines remove thousands of neat cores.

The benefits - at a glance...

- ✓ Relieves surface compaction
- ✓ Prevents surface sealing to enable air and water to reach the root zone
- ✓ Effective thatch removal in dry weather without risk of cracking from deep grooving
- ✓ Excellent preparation before seeding
- ✓ Exceptionally smooth and quiet in operation

Dyna-Spiker

The Dyna-Spiker produces neat deep slits and an undisturbed surface.

Powered spiker unit.

Similar to a Sarel Roller, but utilising a patented powered vibration principle, the Dyna-Spiker drives its spikes deeper into the root zone, and opens up a longer slit. A range of different spiking and slicing blades can be quickly fitted making this an incredibly versatile and useful piece of equipment.

When golf greens become hard in summer drought conditions, the NEW Dyna-Spikers' vibratory spiking action is the solution, powering its spikes through the hard surface and deep into the root zone.

These versatile units provide you with an effective means of opening up parched greens to enable irrigation, wetting agent or fertiliser to penetrate. This machine is an exceedingly versatile item of aeration equipment that you can use all season long, giving you excellent value for money.

"Wow - there is absolutely no disturbance!"

"Nothing else penetrates as deep without using a tractor mounted implement."

The benefits - at a glance...

- ✓ Penetrates when the ground is too hard for even Sarel Rollers to have an effect
- ✓ Allows air, water, wetting agents and fertiliser to revitalise the roots and keep the turf healthy
- ✓ Can be used any time of year with minimum disturbance

Dyna-Brush

The Dyna-Brushes are ideal for collecting aeration cores.

Contra-rotating brush units.

These units incorporate a reverse drive gearbox so that the brushes rotate the opposite way to the direction of travel. This gives the brushes superior performance for cleaning out debris from within the turf surface, and stimulates a healthy erect sward. The Dyna-Brush units are the ideal partners for the Dyna-Corers for golf courses that want perfectly clean greens in the minimum time and with no disruption or disturbance.

They are also equally brilliant for collecting pine needles and the like that become embedded in the turf and are so hard to remove by any other means.

"Very impressed with the Dyna Brush - it worked wonders, standing up the grass and cleaning out the sward."

"Collected the Dyna-Corer's cores even though they were very wet - amazing!"

The benefits - at a glance...

- ✓ Collects dead grass, clippings and even pine needles from within the turf
- ✓ Sweeps up mini-cores and similar debris to leave a perfectly clean surface
- ✓ Contra-rotating action stands the grass up
